Alejandro De La Rosa Cortes

Senior iOS Engineer
alexdelarosacortes@gmail.com | (206) 488-5121
https://www.linkedin.com/in/alexdelarosacortes| Seattle, WA

Profile

Senior iOS Engineer with 9+ years of experience building and scaling mobile products across Big Tech and startup environments. Delivered AI-powered and seller experiences at Meta and eBay across products and surfaces reaching 1.6B+ users and 1.7M weekly visits, while also founding and operating a production startup and helping scale Kinedu as one of its first 10 engineers. Experienced in Swift, SwiftUI, UIKit, mobile architecture, experimentation, testing, mentorship, and end-to-end product delivery.

Technical Skills

iOS: Swift, SwiftUI, UIKit, Objective-C, StoreKit, Core Data, Combine, Swift Concurrency, XCTest, Snapshot Testing.
Architecture: MVVM, Coordinator Pattern, Dependency Injection, Modularization, Swift Package Manager, GraphQL, REST APIs.
Product & Platform: A/B Testing, Feature Flags, Analytics Instrumentation, Subscriptions, Payments, Deep Linking, Universal Links, Push Notifications, Accessibility, Localization, App Store Lifecycle.
Leadership & Tooling: Technical Design Docs, RFCs, Architecture Reviews, Code Reviews, Mentorship, Hiring Interviews, GitHub Actions, Azure DevOps, Generative AI, LLMs, Claude Code.

Professional Experience

eBay November 2025 - Present
Software Engineer, Member of Technical Staff II, iOS

- Led the modernization of Seller Landing Page, a seller surface with 1.7M weekly visits, driving its migration from UIKit to SwiftUI and GraphQL adoption across seller-facing iOS experiences.
- Architected a modular SwiftUI foundation integrating feature flags, analytics instrumentation, GraphQL data flows, and testable presentation layers.
- Shipped Seller Dashboard features used by millions of sellers worldwide, improving core selling workflows in the eBay iOS app.
- Expanded XCTest unit and UI test coverage from 50% to 80%+.
- Established AI-assisted engineering practices for a 12-person iOS team by defining Claude Code guidance for architecture, testing, feature-flag workflows, and documentation, with a roadmap to scale adoption across a 50+ person engineering organization.
- Mentored a new graduate engineer through onboarding, code reviews, architecture guidance, debugging support, and iOS best practices, while also conducting technical screens and coding, debugging, and architecture interviews and contributing to hiring debriefs.

Meta June 2024 - June 2025
Software Engineer, iOS

- Led iOS delivery of AI-powered Facebook Feed experiences serving 1.6B+ users, coordinating timelines, feature scope, design discussions, approvals, experimentation, and production rollout.
- Served as DRI for Comment Summary, designing and implementing iOS architecture for an LLM-powered feature that distilled thread sentiment and key ideas; delivered it from design through A/B testing and production in 3 months, increasing Meta AI usage by 8% and user engagement by 15%.
- Led Feed Deep Dive iOS development from design through production in 3 months, enabling inline Meta AI queries on Facebook posts with contextual generative AI suggestions.
- Partnered with product, design, backend, data science, and Android teams to define mobile API and infrastructure requirements and evaluate multiple product variants using internal experimentation tooling.
- Authored technical design docs and RFCs, drove architecture reviews, presented mobile AI initiatives internally, and reviewed code for owned surfaces to maintain consistency across architecture, testing, analytics, and feature-gating standards.

My Digital Moment May 2020 - Present
Founder and Solo Engineer - (Part-Time)

- Founded, built, and operated a production wedding platform across iOS, Android, web, and backend, owning product strategy, mobile architecture, payments, analytics, customer support, and App Store lifecycle end-to-end.

- Built the iOS app in SwiftUI with end-to-end ownership of RSVP management, digital wallet passes, deep linking, event management, customer-facing workflows, and App Store releases.
- Designed and maintained the supporting platform using Node.js, MongoDB, Next.js, Python, and Flutter, including authentication, event and guest data, wallet pass generation, payments, analytics, and customer operations.
- Scaled the platform to 200 customers and 200 events, processing approximately 60K guests and issuing 25K digital wallet passes.

GitHub June 2021 - January 2023

Software Engineer

- Built C# backend systems for GitHub Codespaces on Azure, supporting cloud development environments for Fortune 500 customers.
- Cut resource provisioning time by 90% through request prioritization, pool optimization, and cloud resource management improvements.
- Reduced incident mitigation time by 75% by building monitoring dashboards and automated response tooling.
- Authored technical documentation and delivered internal presentations to improve operational understanding and align engineering teams on implementation details and support best practices.

Microsoft July 2019 - June 2021

Software Engineer

- Enhanced language services for C#, TypeScript, and Rust in Visual Studio Live Share, shipping autocomplete, go-to-definition, and go-to-implementation features to 14M+ monthly active users.
- Partnered with product and engineering teams to improve developer productivity and distributed collaboration workflows across Visual Studio Live Share experiences.
- Created internal presentations to communicate technical context, implementation details, and project outcomes across engineering teams.

Kinedu September 2016 - July 2019

Software Engineer, iOS

- Joined as one of Kinedu's first 10 engineers and helped scale the iOS app to 450K monthly active users, nearly 1M downloads, a 4.7 App Store rating, and 99.9% crash-free sessions.
- Owned iOS monetization and growth initiatives, configuring StoreKit and App Store Connect for auto-renewable subscriptions and building paywalls, trial conversion flows, pricing experiments, in-app ads, onboarding, and retention experiences.
- Delivered data-driven growth experiments that increased in-app purchases by 40% and improved user retention by 30%.
- Built and maintained deep linking, Universal Links, push notifications, Core Data, offline caching, analytics frameworks, feature flags, crash reporting, accessibility, VoiceOver, Dynamic Type, and localization.
- Partnered with product, design, marketing, and backend teams to define, implement, measure, and iterate on mobile experiences, while contributing to code reviews, hiring, onboarding, and mentorship as the team scaled.

Education

The University of Texas at Austin September 2026 - May 2028

Master of Science in Artificial Intelligence

ECE Paris June 2017 - July 2017

Summer Program in Virtual and Augmented Reality

Instituto Tecnológico de Monterrey August 2013 - December 2017

Bachelor of Science in Computer Science and Technology Engineering
